SUMMARY

Full Stack Engineer and Team Lead with 3 years building production e-commerce and ERP systems in Python and TypeScript. Designs for load and correctness: re-architected push notifications for a **5M+ user** base into an asynchronous queue pipeline, cut Order API latency by **67%**, and built a hardware-integrated biometric attendance backend with idempotent ingestion and full audit trails. Leads a team of 4 engineers with a verification-first, AI-assisted workflow. Seeking senior full stack roles on remote teams in the US and Europe.

TECHNICAL SKILLS

Languages: TypeScript, Python, JavaScript, SQL, PHP

Backend: FastAPI, Node.js, Express.js, NestJS, Laravel, Celery, REST API design, JWT auth & permissions

Frontend & Mobile: Next.js (App Router), React, React Native, React Query, Zustand, React Hook Form, shadcn/ui

Data: PostgreSQL (schema design, indexing, query tuning, constraints, advisory locks), Redis, Meilisearch, Alembic, Prisma, Supabase, MongoDB

Cloud & DevOps: AWS (EC2, S3), Docker, GitHub Actions CI/CD, Nginx, Linux server management

AI: AI-assisted engineering with Claude Code and Codex (project context docs, custom review skills); currently learning LLM apps, RAG and embeddings

EXPERIENCE

Govaly Pvt Ltd — Full Stack Software Engineer / Team Lead

Jul 2025 – Present

Lead a team of 4 engineers across Govaly's e-commerce platform (Next.js web, React Native app, FastAPI / PostgreSQL backend) and client ERP systems, owning architecture, releases and production operations.

- **Re-architected push notifications for a 5M+ user base**, replacing a blocking per-user loop that crashed the server under traffic spikes and hit Firebase request limits with an asynchronous Redis / Celery queue pipeline. The API now responds instantly and peaks are absorbed by a scalable worker pool.
- **Built the "For You" hybrid recommendation engine** (FastAPI, PostgreSQL), blending searches, views, cart, orders and category affinity with admin-boosted products to power personalized feeds on web and mobile.
- **Cut Order API response time by ~67%** (1.2s → 0.4s) through query optimization, PostgreSQL indexing and caching.
- **Architected the C&F ERP for Standard Freight Incorporation (150+ staff)**: normalized PostgreSQL schema and FastAPI layer for jobs, vouchers, billing, accounts and HR, plus ~15 financial reports (Ledger, Journal, Contra).
- **Designed the ERP's biometric attendance backend**, integrating ZKTeco SenseFace 2A terminals directly over the PUSH protocol with no vendor middleware (details below).
- Own AWS deployments and Docker / GitHub Actions CI/CD end to end; shipped Meilisearch-backed search and server-rendered catalog pages (Next.js App Router) for discovery and SEO.
- Helped build the team's AI-assisted development workflow: architecture and code-pattern knowledge files that keep generated code consistent with a large legacy codebase, custom review skills, and a diff-first verification checklist (types, lint, tests, security review) before every merge.

Coders Lab Limited — Software Engineer

Dec 2023 – Jul 2025

- Built manufacturing ERP workflows for **HKD International (CEPZ) Ltd**, covering Bill of Materials, Master and Supplier Purchase Orders, materials control and production planning (React / TypeScript, Laravel, Node.js, PostgreSQL).
- Spent **two months onsite at the manufacturing facility** mapping real production processes into system behavior, then built reusable data-heavy form components for complex ERP input flows.
- Delivered features across concurrent client projects in Agile / Scrum, reviewed code, and fixed bugs and performance bottlenecks in legacy codebases.

SELECTED SYSTEMS

Push Notification Pipeline · 5M+ users · Govaly

Python, Celery, Redis, PostgreSQL, Firebase Cloud Messaging

- **Problem:** notifications were sent by looping over users inside the API request. Under heavy traffic the request blocked, the server crashed, and Firebase rejected bursts with too-many-requests errors.
- **Design:** the endpoint validates and enqueues the job, then returns immediately. Celery workers on Redis, backed by PostgreSQL, drain the queue, and the worker pool is scaled up or down to match traffic.
- **Result:** the API stays non-blocking at any volume; traffic spikes lengthen the queue instead of taking down the server.

Biometric Attendance Backend · ZKTeco SenseFace 2A · SFI ERP

FastAPI, PostgreSQL, Alembic, Nginx, AWS EC2

- **Direct device integration:** implemented the ZKTeco PUSH receiver (handshake, attendance upload, command polling, acknowledgements) and a server-to-terminal command queue that provisions and deprovisions employee identities with leasing, retries and acknowledgement tracking.
- **Data integrity:** immutable raw evidence, idempotent ingestion that deduplicates replayed uploads, and device acknowledgement only after the batch is committed.
- **Reliability:** durable PostgreSQL-backed work queue with an advisory-locked singleton worker, bounded exponential retry, crash recovery and heartbeat monitoring.
- **Attendance engine:** effective-dated shift revisions guarded by an exclusion constraint against overlapping assignments; late, early-leave, overtime, holiday and weekly-off rules; late-arriving punches recalculate finalized days without overwriting manual overrides.
- **HR workflows:** correction requests with approval and supersession history, employee self-service, seven reports and permission-guarded APIs. No biometric templates or photos are stored in the ERP.
- **Verified, not assumed:** caught an AI-proposed device-authentication design the hardware does not support by checking it against device documentation before implementation.

“For You” Recommendation Engine · Govaly

FastAPI, PostgreSQL, Next.js, React Native

- Hybrid ranking that combines behavioral signals (recent searches, product views, cart and order history) with category affinity and admin-boosted products, so merchandisers can steer what customers see.
- Designed the API contracts consumed by both the Next.js web app and the React Native app, alongside catalog, category, filtering and search journeys.

C&F ERP · Standard Freight Incorporation

Next.js, TypeScript, FastAPI, PostgreSQL, Docker, AWS

- Delivered end to end for a 150+ person freight company, from requirements and schema design through APIs, Next.js interfaces, testing, Dockerized deployment and AWS release.
- Modeled job management, voucher management, billing, accounts and HR with clear relational boundaries between modules, and built ~15 operational and financial reports.

EDUCATION

B.Sc. in Computer Science & Engineering — International Islamic University Chittagong 2022

CERTIFICATIONS & LEARNING

AI Engineering (in progress) · Full Stack MERN — Programming Hero · Complete Node.js Developer — Udemy · Advanced Patterns in React — Cosden Solutions · Data Structures & Algorithms — JS Bangladesh
